FEB 19 1944

MAY 1944

43435

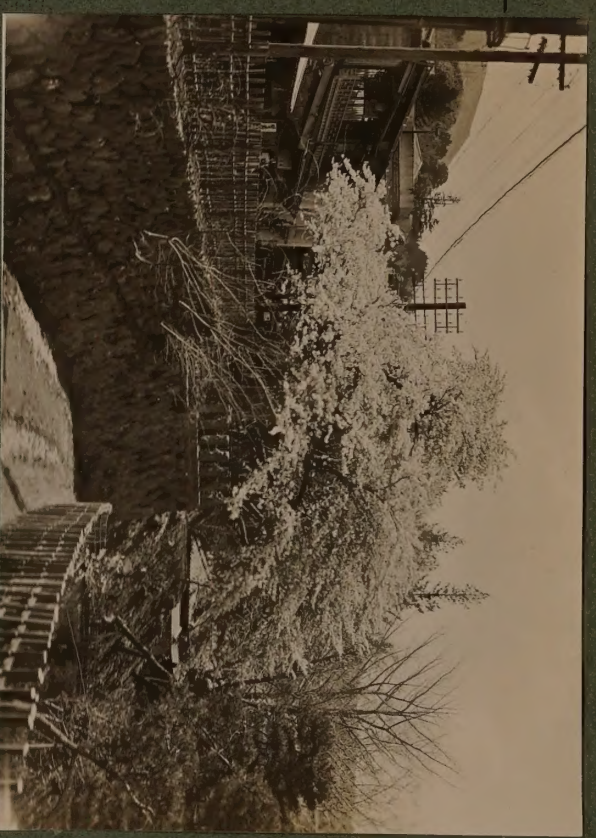

Betula 74 and $3\frac{1}{4}$ life size section of a fruiting branch of this excellent under-
 shrub, secured from the Botanical Garden yesterday. Plants dioecious, foliage
 deep green sometimes variegated, fruit bright shiny red, flowers male
 or less inconspicuous, and of all parts prominent.
Betula specimen #105. Seed sent under #105

43360. At Miyanoshibe, just before entering the tidal *Shige* grounds.

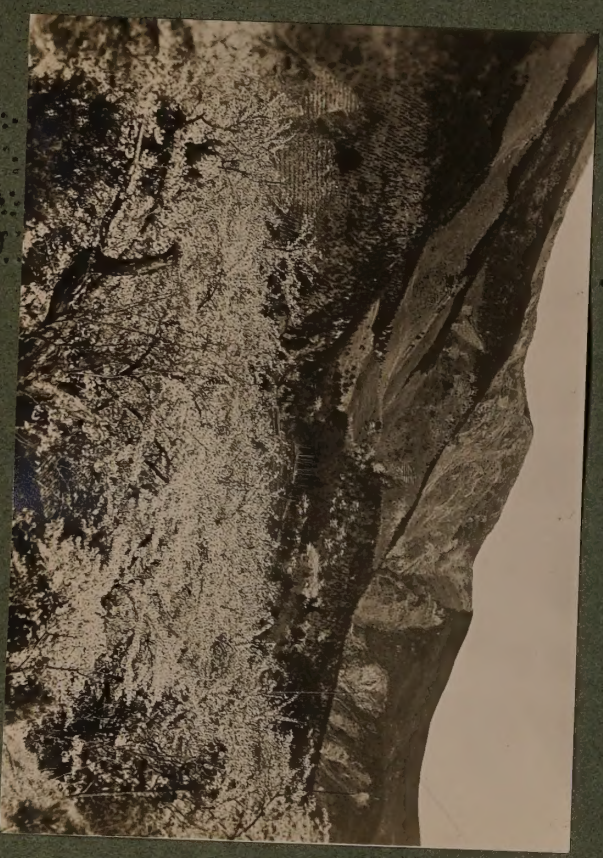

43361. Looking over a wealth of Cherry blossoms to the mountain across a gorge at Miyanoshibe.

By old 43354. Looking west on Ichikawa road and of cherry blossoms scattered on both sides to the Japanese line.

43360.

43361.

A photographic copy of the tablet showing in Japanese and English
the record of this 4.339 Z wisteria following their made a National
Monument. See pictures # 43.394 # 43395.

A nearly vertical line of the coracoid 43394 of Washington, which, perhaps, is the
largest and deepest coracoid in the series. It is found in the same way as the coracoid
the numerous fragments from the one source. The series is 6. It is not characteristic
the coracoid which is found, and is found, and is found, and is found, and is found
45x104 feet. See picture #43393 and #43395

View of a Japanese Cherry blossom garden among doubly flowering
cherries. The bloom 43 497 are white with pink tinge. The setting
is great and the view most pleasing and attractive.
Taken in one of the courts of the Imperial Hotel.

View of a Japanese cherry lantern among blooms
of double flowered ⁴³⁴⁹⁸ing, almost white slightly
tinged with pink, cherry blossoms. Taken in
one of the Courts at the Imperial Hotel, a fascinating
and attractive view.

43395. A rather distant view of the main
trunk and portion of the Arbor which is 45x104 in dimensions. See
pictures 43394 and 43393.

43362

Flowering Cherry Tree (single) on the side of the road at Miyawaka, a short distance from the Suwayama Hotel. Very handsome!

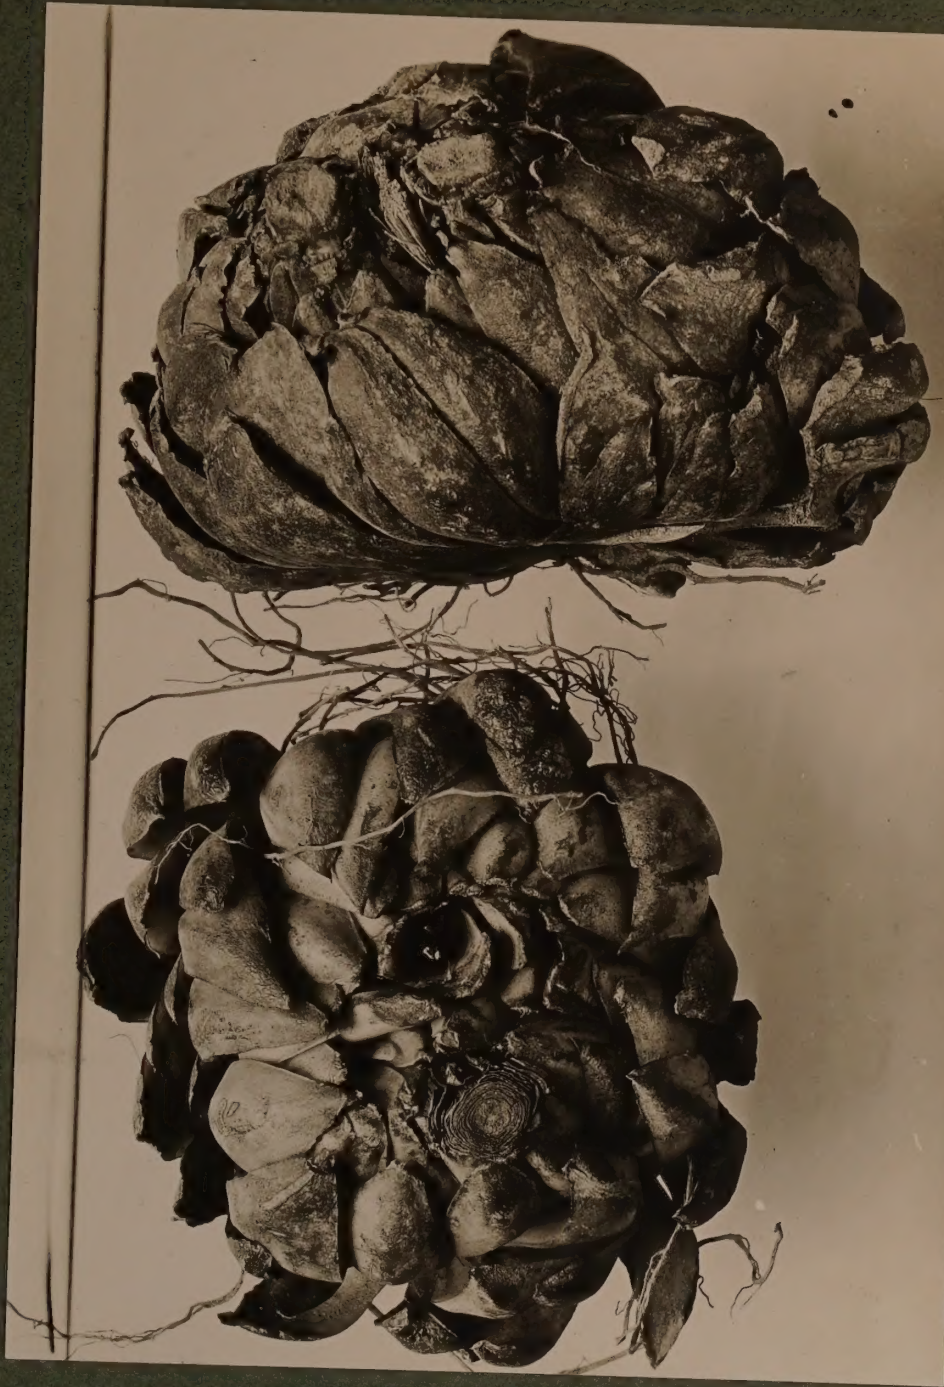

433621

43407

43400 Fairly nearby view of the top of 43400. Only about a dozen Candelia in Suwayama Park. Candelia is apparently not quite commonly used in the food plantings here today. Japan. 43407 A nearby view of some of the branches of a double flowering Cherry in Suwayama Park. Tokyo. Japan.

View of two of the large lily bulbs secured yesterday at the West end of the Department
 stores, Tokyo. Japan. 43537 The bulbs are shown here, between a quarter
 a half life size. The bulb to the right weighs 725 grams. The other 515 grams.
 These are the largest lily bulbs due home seen. This is an edible lily.
 Sent no under # 46.

See flowers 43541, Anticardinal Express Station.

Beautiful 43543, well frunk tree

43542, Cherry in fine flowers

43544, bright red variety of tree

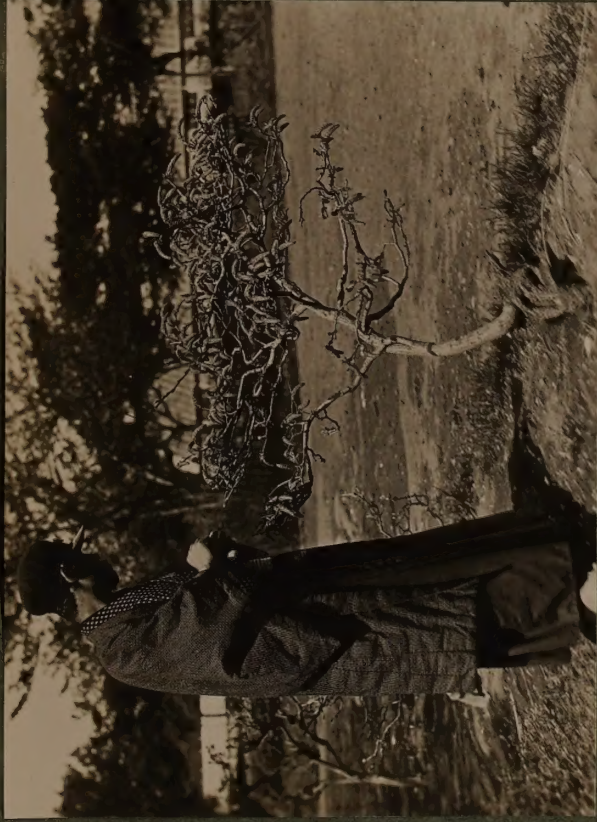

43423

A view of an *Atinidea* which we do not recall having seen in the state. We will try to get seed in case it bears fruit.

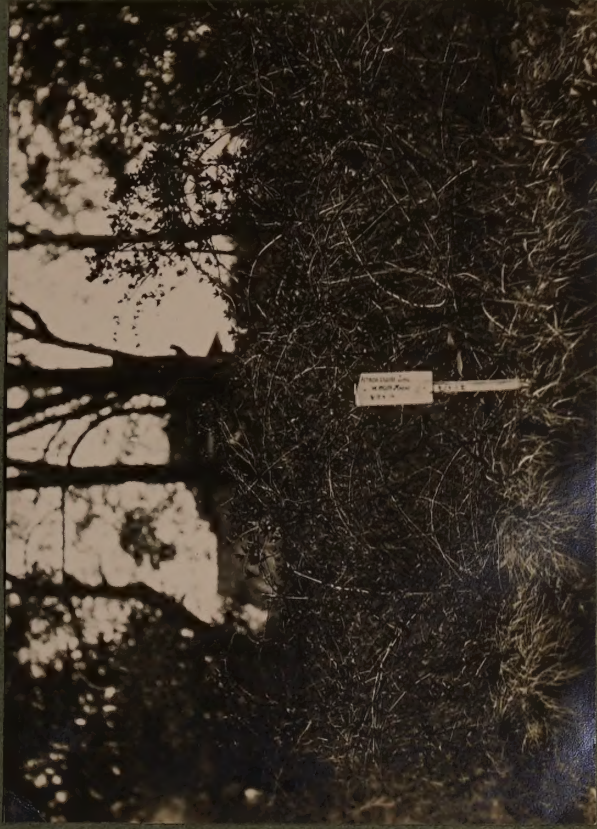

43424. This broad-

leaved evergreen shrub is extensive by planted in the parks here and under certain conditions and certain exposures it really is an excellent under shrub.

Noticing a 43414. *wisteria* which is just beginning to push its flowers.

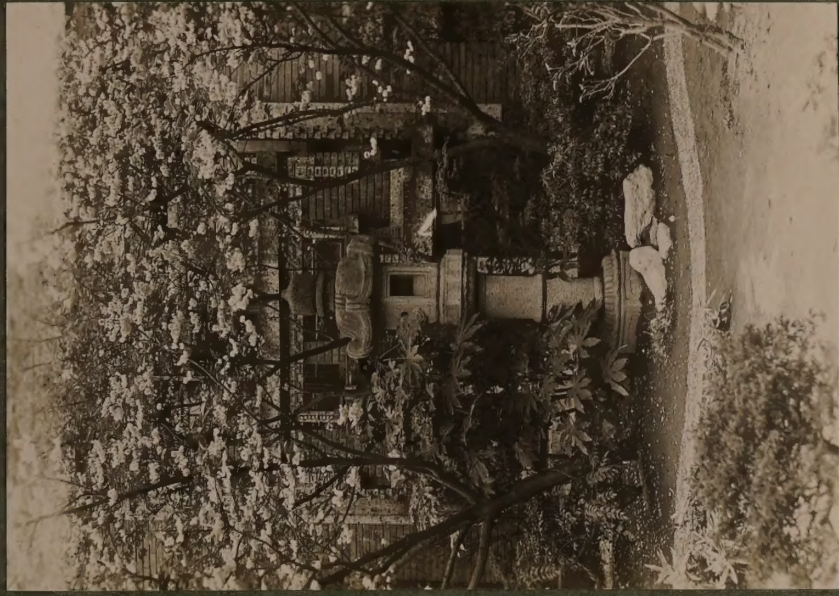

43423.

A fairly nearly perfect of 43428 a good many 2.9 were fast of space
and a hillside at the bottom. It is a garden. It is under certain
conditions and for certain locations & wonderfully ground cover
and ornamental. The common name is *elephantopus*.

43458 A stone lantern among
the double flowering cherry
trees in blossom in the court
of the Imperial Hotel.

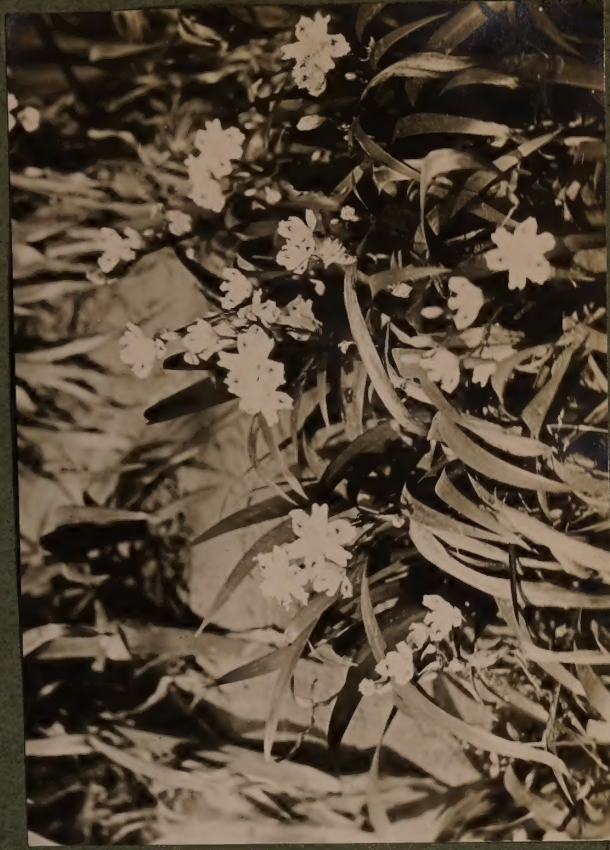

43458.

43459 Neatly of double flowering
cherry branches and blossoms
at the Imperial Hotel.

43479. A nearby view of a very attractive
in Hibiya Park. We find it both in wet
and dry situations.

43459.

43485.

A close up view of flowering branches of a Japanese white double flowered cherry at the Imperial Hotel.

43486.

A nearby picture of a lifted tree with a Japanese flower. We observed that of this French tree was a small pair of birds in the Japanese building. There is no deciduous.

43487

A fairly nearby view of a cherry blossom branch in blossom, showing its relative position among the flowering cherries.

43489

A cherry blossom festival banner, among flowering cherry trees at the Imperial Hotel, Tokyo, Japan.

Double flowered
Cherry blossoms 43488. Yoshino variety

Red flowered
Cherry blossoms 43490. Yoshino variety

Close up of the
Cherry Blossoms 43492. See #43491.

Close up of the
Cherry Blossoms 43491. Yoshino variety

43546 A close up view of the S on
trunks from one crown. The man in
the background. Give an idea of
their size and distribution. Koshingaga

meadow with light pink flowers. the flowers
meadows or 43545. more across

43547

A nearly view of one canyon
showing nearly some of the
long ridges of flowers. We
measure some of that area. 86
long.

43546.

Looking across 43548 a portion of the island
which is over 1000 yds. distant
when at Kachigaya. Japan.

View along one side of the coastline, about 8 mi
of the distance 43550. Repose suggested
its day as much as 36 in long, all morning.

in along the 43549 water side of the
coastline when at Kachigaya. Japan.

View across a portion of the island, distant
over a 43551. Repose taken at mid
noon.

53554

View showing a portion of the little
lake and of a portion of the Oregon
covered track.

View showing some of
bank of the small
the old red cedar vine.

43552

43553

View showing a portion of the
Wisteria arbor bud to the
side and aged, but very
interesting tree.

43554

43555.

Three red sandstone mounds at a
distance about one half to three
quarters of a mile from the Kaohi
paga Roadway station.

43556 View along the side of the
western yellow mud to the
small lake from the side opposite
the shrine. Kaohingaya, Japan.

43556.

View of a portion of a bank at the railway station, Nagasaki to
 Nagasaki, Japan. The Japanese made a wonderful
 use of every inch and
 could pattern after them in this respect to advantage.

43558. View in the opposite direction from
the view shown in # 43557 but just as effective and fascinating.

43581 A nearby view of some
of the blossoming plants of
Palayao.

Girls picking
Agallanwood #43578, and stringing
Agallanwood #43578, in white paper.

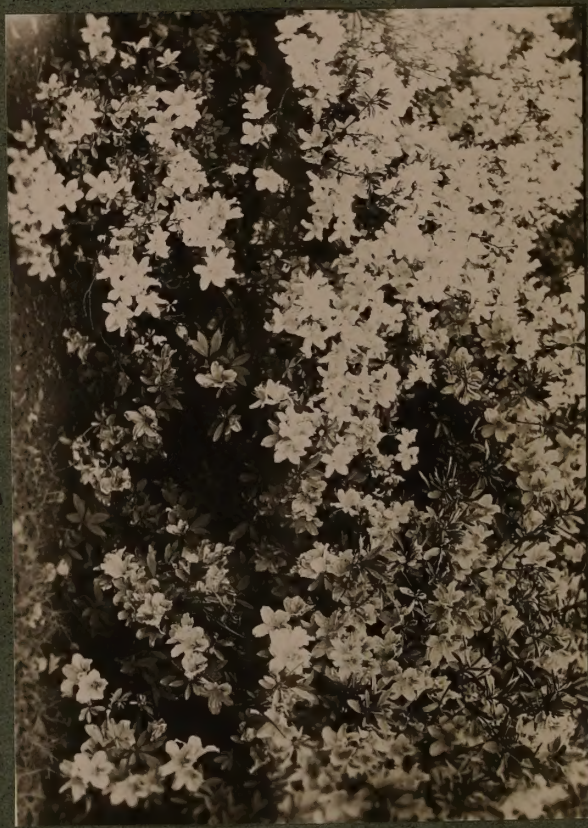

43581,

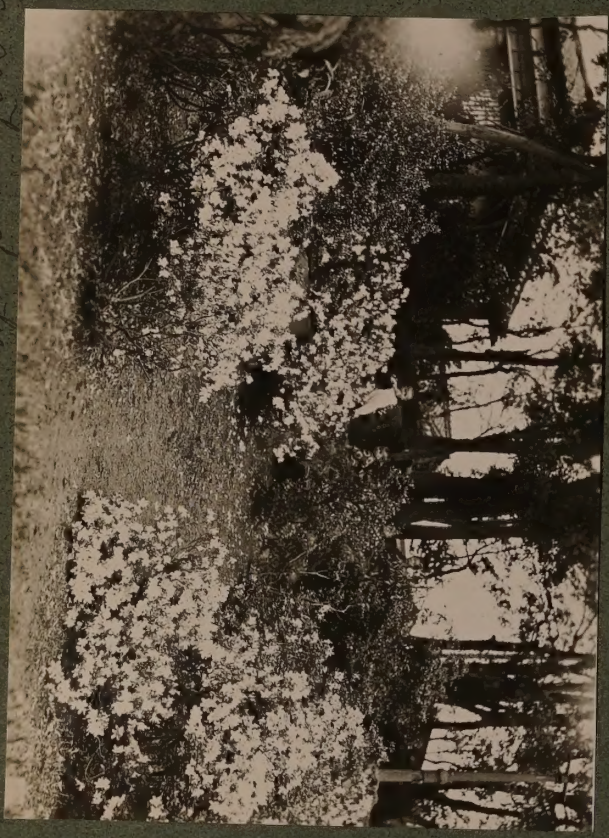

43579. Children
picking and stringing Agallan
wood. Shikha P. P. P.
Lahyo, Japan.

43582 A nearby picture of purple
and white flowers Agave

43582.

43580. Shrubbery
Agave in Shrub
park during day the blossoms

View in a section of the
Agave plantings 43583, in Shrub park.

43590. The monument to the left
relates to this tree. The tree is quite
old and is of historic importance.

43590.

43584 A canyon
of wisteria arbor, a foot bridge
across a portion of a small lake
in Shikabara Park, Tokyo.

43594.

43594 View showing monumental
plantings along a walk and shrine.
Note the tree trunks.

43597. View along a portion of the rail
or more is a large building of portions
of which showing grounds of central
Shanghai with wooden seats
are to the found of monument
distances along the road.

At the July 3595 of the East
side of the 3595. Very little
and for not stadium as there
very nice planting.

* From the side of the road
to the stone. Note the stone
bench and nicely planted garden
the plants in flower are agave.

View along a road 43596, and high x

43597.

43605. This beautiful sight shows
the along the walk in the Oak was looking
beautiful. The scene itself is also interesting and
attractive

43617.

A view of a portion of the
arch of the Washington Monument
from a position to the N. W. of it
and slightly above the white steps
in the fore ground are dry alone.

Top and available
Washington Monument
the distance

43615 to the right west of the
arch. This shows to ground

43614 Monument under
the Washington Monument arch in
the distance

Top and available
"Top" or "The Spirit" of the
Washington Monument.

43617.

4123

43618

View from a position to the N. W. of the
Ushijima wisteria showing a portion
 of it. a. d. the surrounding place
 a portion. The visitors who have
 assembled, enjoy this gorgeous
 sight.

43618.

A nearby picture of a Japanese poem
 in Japanese to 43616. The *Ushijima*
wisteria. Reading in English. When
 you are careful of your character
 and trust people will respect you
 and the extremely high but grateful names
 of the beautiful *Ushijima wisteria*.

43619. A portion of the tea house
 a small stream, guests.

View of bridge 43620. Lake and shore of
 mountains at extreme right. Under the great 3627. Truly dropping forest
 even deep into administration of the purple blossoms

During next the beautiful vegetation in front of a small 43628. Vegetation as may
 of them. Just 43623 the photograph of a narrow 43628. Vegetation as may
 of function on.

of the wisteria when in full bloom. The measured flowers measured
to-day respectively 42, 42, 47, 43, 37 and 41 inches in length
and three nearly twice as long.

43638.

A banana grove west of the south side of the vine and arbor. The
length of the arbor is about 100 feet. The vine near the center of
the distance and 20 to 50 feet away from the vine.

43639.

Practically the same as picture # 43638

43640.

A panoramic picture taken from a position to the W. W.
of the river.

A rather messy 43634. View of the numerous trunks originating from one source. This is the opposite side of the vine system. See a picture #43394 made April 18 before or just about the time the planting was finished.

43635. A fairly close up view of the long
gracful veins of flower 47 inches or more in length.

A nearly new of *vacuum of* *vacuum of* *vacuum of*
almost as long as the young before are lost

43636.

43637.

The same specimen of wisteria as those shown
in picture # 43636 but in this instance held
by an American girl

43638.

A panoramic view of the south side of the vine and arbor. The length of the arbor is about 100 feet. We are near the center of the distance and 30 to 50 feet away from the arbor.

A nearly sure of a few of the long
 slender records of *Chlorophytum*
laetevirens

43629.

A beautiful creamy white climber which
 stands in as being very handsome.

43682.

43693 View across a portion of the small lake to the south
of the five foot wisterias at the extreme right are to be seen a few
bushes of the fine foot wisteria. Kashigaya, Japan.

43694 View nearby of a portion of the arbor
and fine foot wisteria, in the foreground to the
right are peonies. the measured tresses of flowers
on this wisteria which were as much as 47 inches
in length, and still growing.

43695 A view of most of the south side of the fine forest wisteria
arbores and flowering wisteria from across the lake to the south.
Kashiyaga, Japan.

the garden
the
of flowers
inches

43696 View along the water from the side of the water
above and water in full bloom. This certainly was
a gorgeous sight.

43697 View from across the small lake, showing flowering
Azaleas and at the extreme right a portion of the fine forest westward.
Near Koshigaya, Japan.

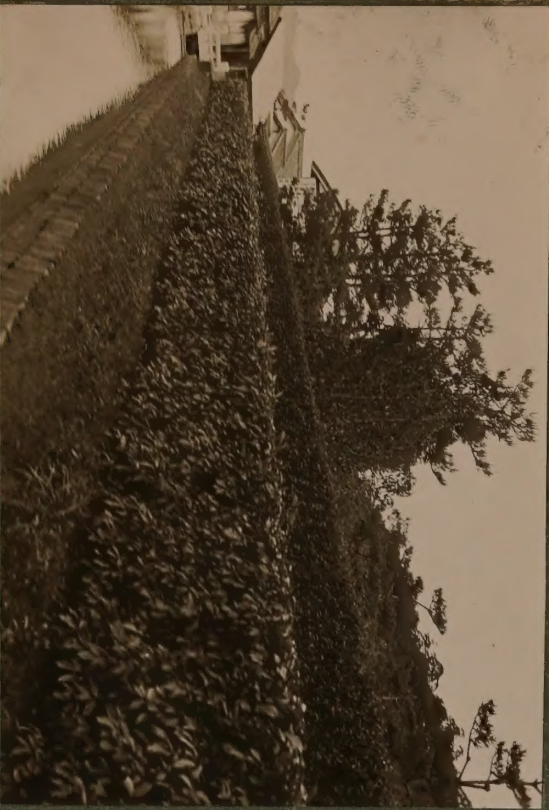

436976

A panoramic view showing some thing of the attractive setting and surroundings of one of the Government Station buildings at Kachigaya, Japan.

43697^c

A panoramic view of the S. part westeria and some
of the other plantings, from across the small lake to the south of
the westeria arbor.

43710 80 inch flowered Cypripedium. The plant is 2 to 3 feet high. 40 diameter. This plant is about 300 years old.

43715? The back hedge is a bright red leafed plant. The front one is green and both are handsome.

43722 Sakamoto, a small village of the Iwano side of Mt. Fuji. A house of adobe and stone.

house top

43766 A row of white wood along a ditch near the Shinto shrine.

43764 Wied Azaleas on the hillside
near Kaulo-machi, Japan, they
were very attractive.

43765 A wild rose with many
clusters of small white flowers.

43822 A fairly new by view of a
very pretty climbing creamy white
flowered rose which we believe is
of American.

43817 Rosa species - silver
moon -

43873

A portion of a sarsae planting of *Lithos* said to be
 grown for ship weed to the United States, likely
Sarsae, (?)

A dwarf wist. 3829 *terre tree in full bloom in Ukiyama Park, Tokyo, Japan.*

43830 *Robur chito in Japan, Hokkaido, Japan.*

43832 *same as 43830*

43849 *A nearby view of a small branch of a small white flowered shrub as a low hedge plant.*

43831 *A nearby picture of a bouquet of white flowers of the same color of these two colors.*

43880

Picture of the large tree transplanted to this position in
front of the Sankais Building.

43950

A native woman and I near the first rest station on the trail up Taji's river and larger than those we have seen, from the north, holding a bundle in slates. These plants in wild are full of wild orchids, large pink flowers very handsome.

53956

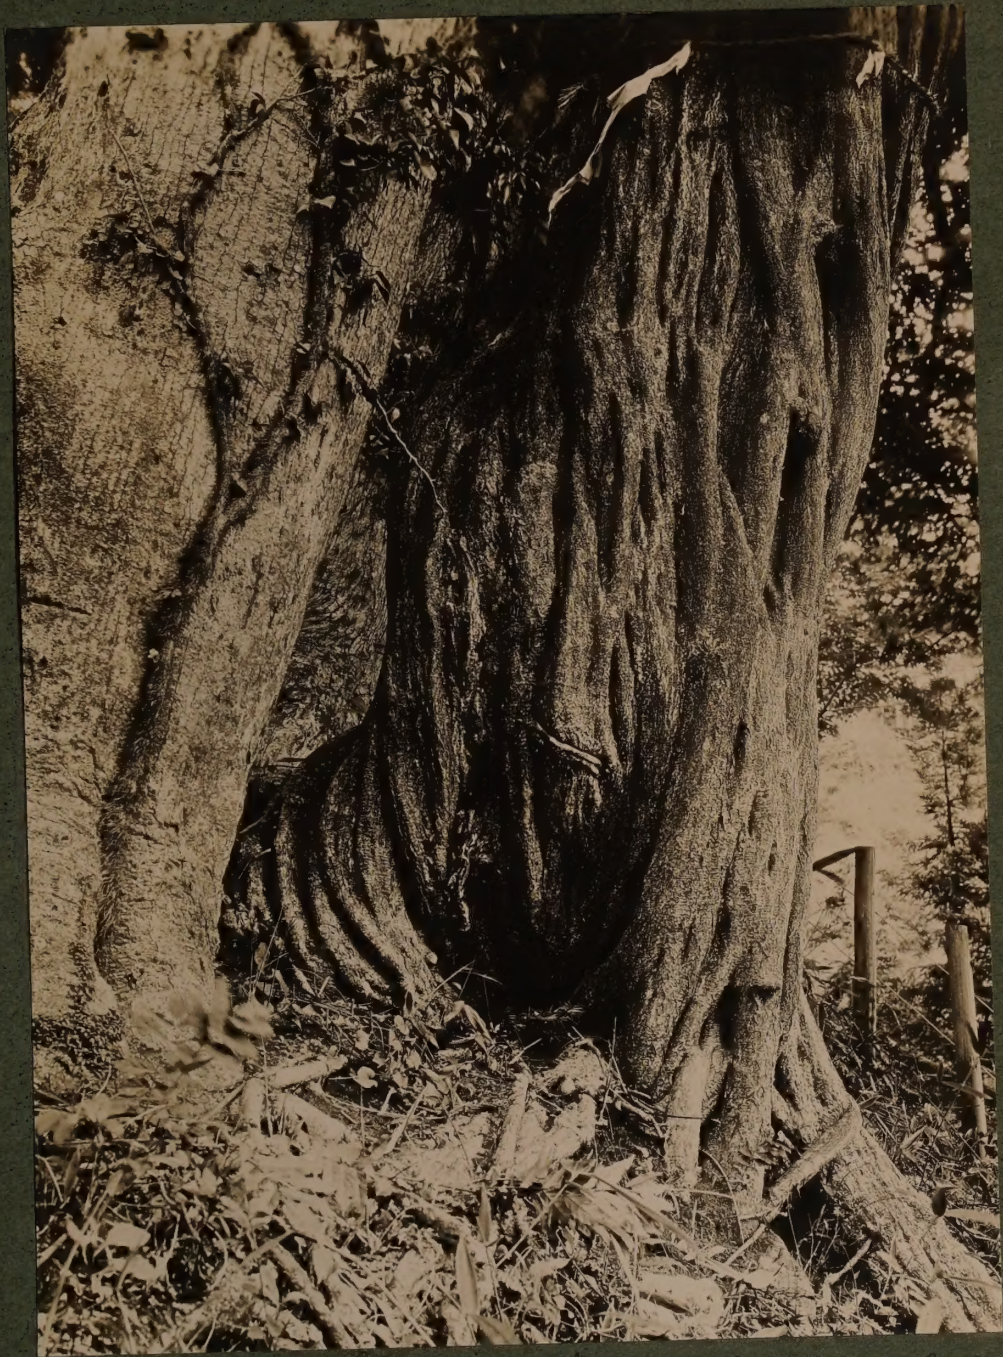

A rather close up view of a very fine specimen of a bridal wreath in full bloom. It appears to us that the flowers are more numerous and larger than those we have seen in slates. These plants in wild are very handsome.

53957 View of a good sized
tree of what we take to be a species of *Vat* near oak. The seeds are small and
simple, growing on a long flat a few inches a bright wine red color, very showy
to the east of Lake Chapala, M. Mexico is
standing under the tree and pointing
up to the fork over the head.

53958 A good sized view of seed clusters of a
plant up near oak. The seeds are small and
and bright wine red color, very showy
and attractive. There are believe to
have remarkable ornamental
possibilities. The hope to secure
material and later.

43967 This view, fairly close up, shows a portion of the base of a very large single stem wisteria. This stem is 20 feet or more to the branches and the vine covers a good portion of two or three large trees. The trunk of this vine at 24" inches above the ground is 81". See pictures # 43968-9

43994, 43992
43996.

44025. View
of a vine
bearing
good sized
branches of
rather small
green fruit
in this case
its growing
on a rocky

44026 Near Kyoto, Japan. A beautiful
red fruit shrub which has several seeds

44025-

44033

Very quiet distant of a fine display of this
vine in the mountainous jungle, climbing high up into the
trees. The many part and full colors of leaves were
very attractive. Dec # 44034.

44034, A somewhat near range of
portion of this vine from another position, Dec
44033

44035 - showing a fairly close up of a tall propagating plant, on a rocky hill by the Luchina Ry. It has a long spreading head of creamy white rather small flowers; see # 44036.

44036 A rather meagre picture of the flowering, spiked at the flowering plant, shown in picture # 44035. Taken along a rocky bank of the Luchina Ry. to Mt. Takao, Takao, Japan.

44038 This (Lily) is fully in flower 4
 feet in height as can be seen by comparing it
 with the flower which is standing by with the
 same up. There are 17 flowers to each on this
 plant, they are of pink flowers, the one last the
 flowers are white, the seed in bulb of this
 species of Lily under tree # 910

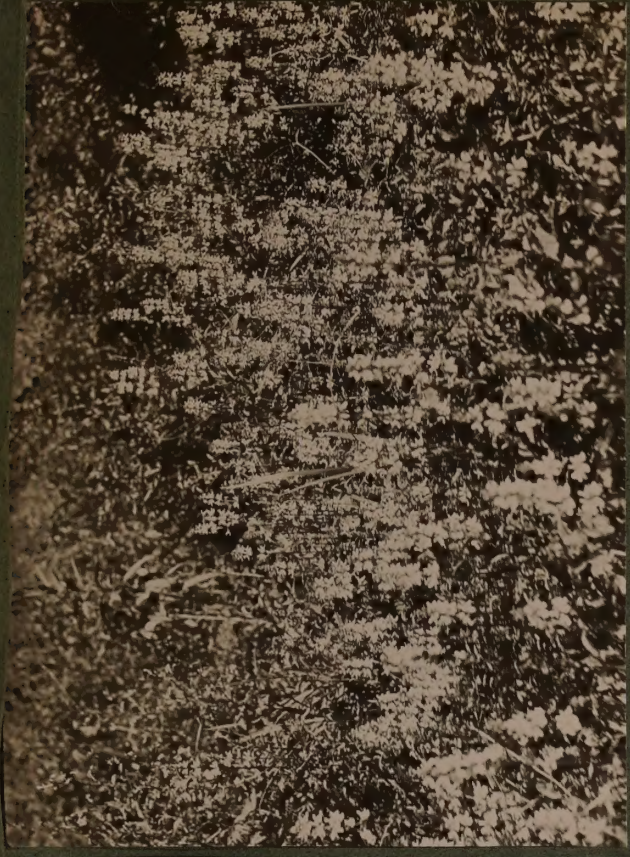

44062 A weakling vine of this small
 attractive tree, darkish green, much
 branched in appearance, mostly
 seed and fruit are oblong, fruit
 dark purple to black.
 Seed sample # 945

44096

This is a very nice weed (Compositae) flower and could be used to good advantage in a herbaceous border. See picture # 44098.

44098. This Compositae was taken in the vicinity of Lake George, N.Y., near the Eastern base of Mt. Fuji. See picture # 44096

44097

This wild flower is quite abundant in the Mt. Fuji region and in some places and attractive appearance. They are a purple mint-like wild flower.

44098

44099 Near Lake Yamanaka, Japan. This tall grassy attractive thicket is quite common in the rice fields region. It is purple with

44103 This plant with this peculiar looking spikes of thorns was in the court of the same estate we spent the night of the 24th.

44105 - This tree is known as "Hachikuma" It is 30 feet or more in height and measures at 3 feet above the ground 83 inches in circumference. Seed sent in envelope over # 658

44108. On the Eastern slope of Mt. Fuji near the village of Subashiri. This is an interesting fruiting plant of which this tree (See picture # 44109) is the only specimen we have thus far sent. It is said to be a Japanese walnut.

In the wood to the East of and along the base of Mt. Fuji. This beautiful white flowered hydrangea, sometimes as much as 10 feet or more in height grows in abundance.

44108

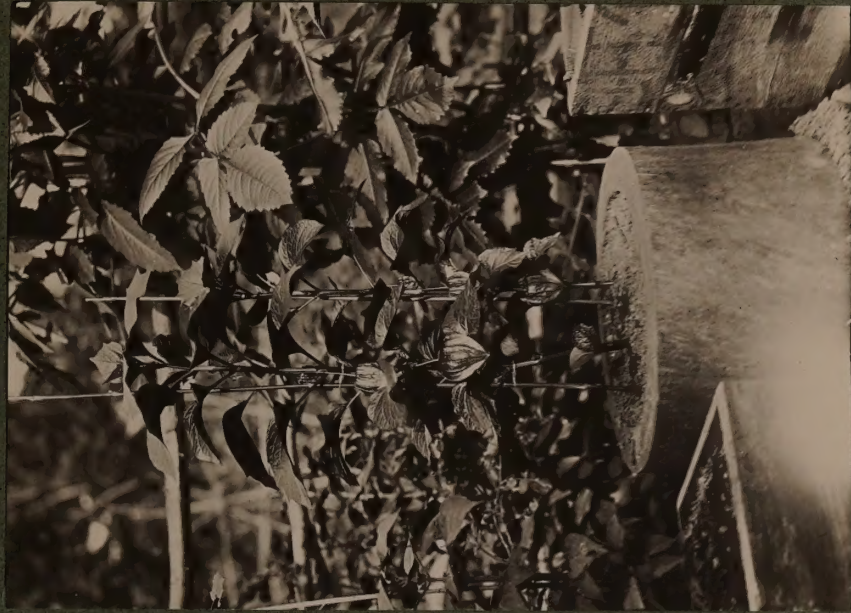

44109

Neen Subashini to the East end of the trace of road.
 July. In a close up of showing of fruit see 44108

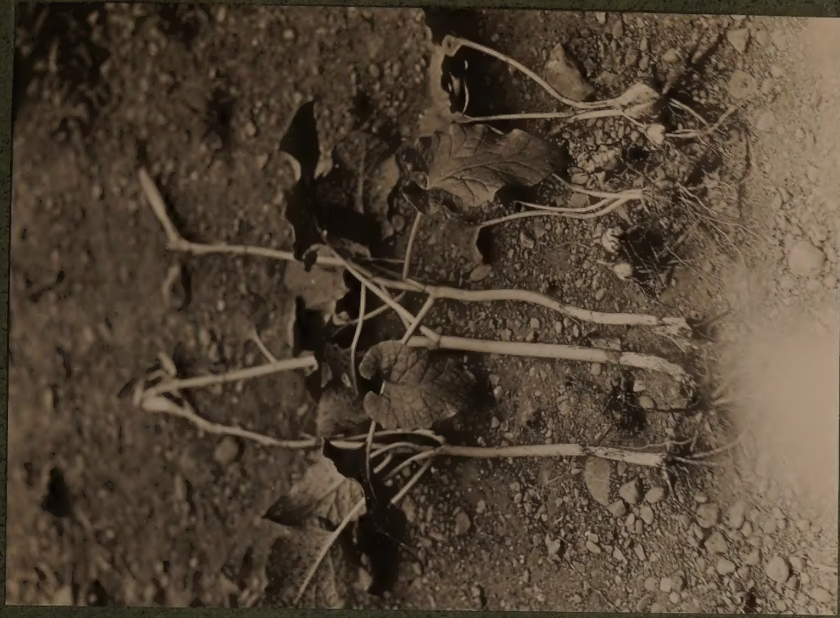

44110

Showing nearby the new
 flower buds of a tree potato of which fruit would
 white July in the garden of a person.

44111

A nearby picture of a large fruiting variety of this Shushe tomato grown as a plant. Here and, the fruit bush is green, orange and salmon or nearly pinkish.

44114

A nearby picture of plants and bulbs of the variety. The bulbs are flowering, bluish.

44115 A nearby view of a position of x

44117 A full blooming lily x

x the fruiting branch from which we secured
all the right fruited seeds over number
616 and Rauhmann specimen #616.

44116 Near the village of Kyaⁿ
Kalamia A nearby view of a full blooming
from which we secured Hilgenschellia.

x As they spread among the grass and
along the bushes, they have found near
the village of Kyaⁿ Kalamia.

44118. A large white flowered lily on a hill side. The plant is very common in the hills of Kyu-Gu, Japan.

44118 Nearby view of a few white lily on a hill side where only recently bamboo was cut away

44119 Two fine plants of the

44120 A close up of one open flower and several ~~except~~ unopened buds

Large white flowered lily as they appear in nature. Taken near the village of Kyu-Gu, Japan.

44121 View of a clump of *Lilaea* of dwarf

branches on the top of a rather difficult
hill to climb. Mr. Dykster is already
to dig it up for the Museum. See #44122.

44122 A nearby view of the
clump of *Lilaea* shown naturally in
picture # 44121.

44123

44123
Showing a cluster of open *Lilaea* growing
over a spread fence holding the tiny leaves
of *auriculata* (papaia).

44125

44125

A nearby view of the flowers of the two plants shown in picture # 44124

"Liggar" like lily dug up for the bulbs
See picture # 44128

44130

A nearby picture of the bunch of lilies we collected from the mountain side for the bulbs.

44128

44130

44131

A nearby view of the flowers of a
fine plant dug up out of the rocks.
For the reader.

44132

A nearby picture of a flowering
plant dug up out of the rocks.
Near Yambukita.

44133. A close up picture of some of the trees full of pink flowers. Some of the flowers measured as much as 12" across. Near Yamashita, Japan.

44133

44135

44134 a fairly new by means of
a fine group of this fine white winged fly near
Hatch of the Point of View a Laminated. The
mould a black and white as well as
colored mushroom pictures of these. See 44135

44136 A poor view of a fasciated Lily with 75 buds. The lily is not well set.

44137 A nearly view of one of a number of plants are dug up to find out the depth of the buds or roots were dug in under. One # 696 and barbarian specimens under the same number.

44139 A nearby view
of a clump of *Lilium* *lilium* from
which we collected apillary bulbs.

44140

A fairly nearby view of a lily in full
bloom by a fence post and maple.
See # 44141

44140, had slightly different.

44151 View of a portion of a beautiful & thorny bush and subshrub. Catalpa flowering some very handsome. In all a most perfect picture of this.

444152 A portion of a display of very fine morning
Glorias. The display was in a building at Kibingya Park.
See pictures # 44B3-4-5, west section.

44153 Central Section of the Morning Glory
display at Sibley Park. See # 44152-4-5. Tokyo, Japan.

44154

East section of the morning Glory display. See
picture # 44152-35

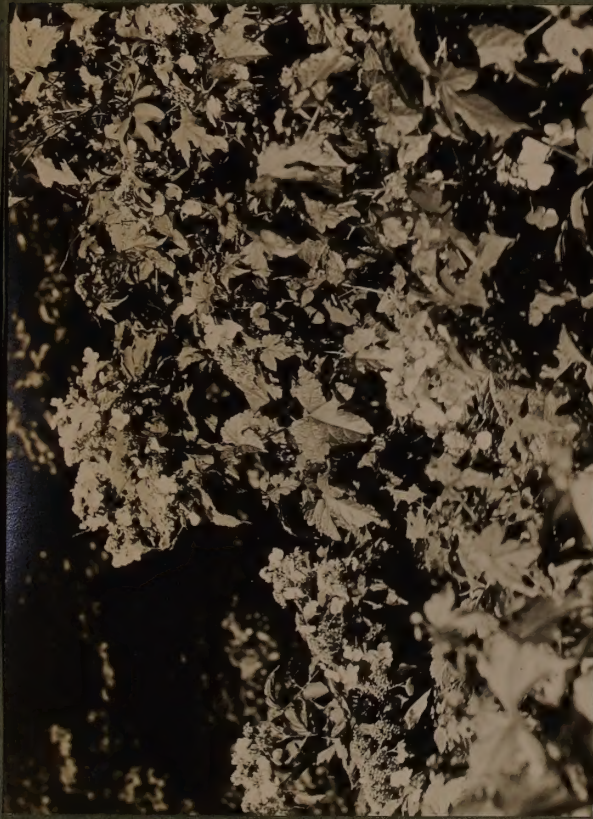

44155A Several views showing from the west a
 good portion of this fine exhibit of trailing geraniums. See
 pictures # 44152-3-4 Nihiga Park, Tokyo, Japan.

Showing a section of a very good display of
 44156 ^{cut flower} gladiolus at Hibiyas Park,
 Tokyo, Japan.

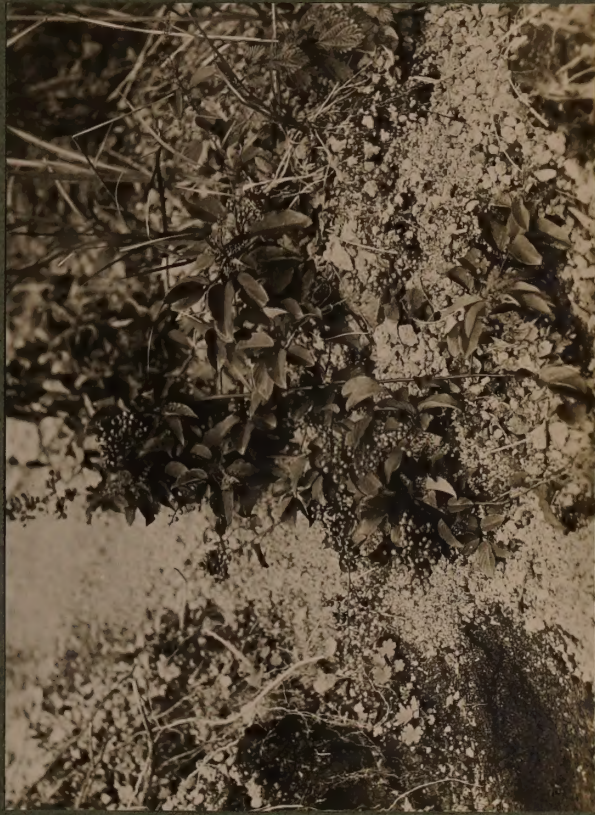

44157 - A General view which shows a
fairly good portion of the display of cut flowers.
See picture # 44156. Gladiolus at Mikaya Park, Tokyo, Japan.

44167 *Hydrangea* sp. tree flowering sp. plant is secured near Kaniyawa
growing in a sunny ravine near Kaniyawa number # 681

44168 Same species of *Heliconia*
plant is secured near Kaniyawa
number # 681

44169 fruiting branches of and
undetermined thorny vine or scrambling of a fruiting vine
a shrub *Verbena* 8223 seed 616

44172 a nearby view of a portion
undetermined thorny vine or scrambling of a fruiting vine

44170 A number of a bunch of these beautiful wild blue flowers. See herbarium specimen # 876 Compositae sp.

44171 A number of a bunch of a small, spiky plant. Flowers are small, tubular. The stems of this wild plant are small, 4" in length. Flowers are a bright yellow color. It is by all means one of the most attractive wild flowers called out here.

44173 A number of a flowering spike of a small orange-red color. It is a very numerous deep orange-red spots and numerous petals. It is a very attractive plant. H.S. under name no.

44174

Mr. W. J. Morse standing under his small tree. The dead limb directly over his head is a portion of it. The tree is about 12" circumference and practically 18 feet in height. It is bearing a heavy crop of Sissone twin-ripe fruit of a beautiful red color. See # 44175. Seed sent in mail Oct. 88.

44175 A nearby view of fruiting branches of this honey suckler. Showing fairly well the Diamnestown fruit. See picture # 44174. Seed and herbarium specimen sent in #88.

44176 A nearly view of a portion of a
 Prunella, one of a striking red color. This fruit
 is large, bright red, juicy and of very good
 quality. (Make trifoliate, small and white leaves)
 Seed sold in water over #859 N. S. 2 are 120.

44180

A nearly view of one of

the many of the beautiful white

spread Lily and the ground of leaves -

favor still. This is the same Lily which we found
 growing abundance before Gatehouse and of
 which we made numerous pictures.

44181
An attractive view across a small
pool in the grounds of the Kaniyama
Hotel. The roof and a portion of the
upper story of the Hotel is in the
background.

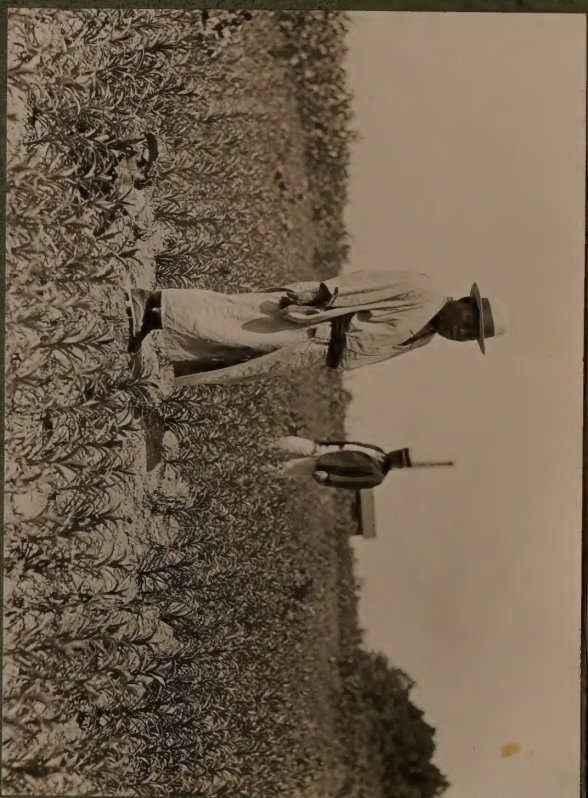

44183
A nearby view of sprays of a beautiful
light pink Hydrangea (hortensia)
which was most attractive.

44191 In the foreground among the
 lilies stands Mr. Y. S. Kato and
 further back Mr. S. Kato. The
 lilies near are cultivated in common
 and lily growing and shipping.

1908 7 7

View of an interesting circular or pagoda shaped wisteria in front of a Japanese business house on the "Ginza" in Sapporo, Hokkaido, Japan. There are more pods of fruit on this vine than any yet we have seen. We have requested the seed. The proprietor is doubtful if they will ripen.

44356

A nearby view of fruiting branches of a tree secured in a flower
shop for this purpose and for the seed. Seed and in winter #1583. The
outer bark and seed capsule break into three parts. It is a very
strong ornamental and used here a lot in flower arrangements.
Eucalyptus sp.

44372 Seed collected in China, Szechwan, Shikang, Japan. *Vaccinium ciliatum*. A nearby view of fruiting branches. Some clusters hang as much as 17 berries. The shrub was about 10 feet in height. See 44373. Seed sent in under 1452.

44373 A nearby view of other fruiting branches of *Vaccinium ciliatum* different from those shown in # 44372. Seed numbered 1452.

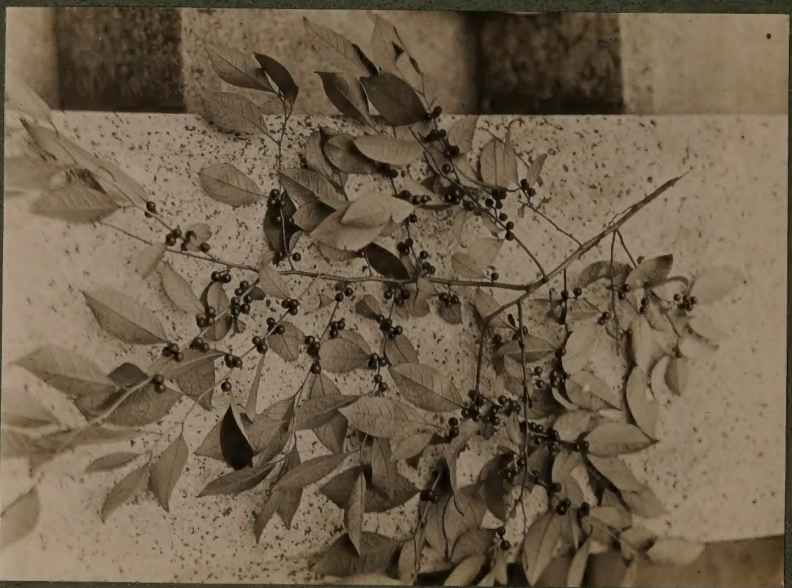

44374 A nearby view of fruiting branches of which is called by the Japanese a *pon*. The swollen portion supporting the seed is said to be edible. See file # 44375. This is an interesting tree. Seed and H. S. sent in under 1451.

443781

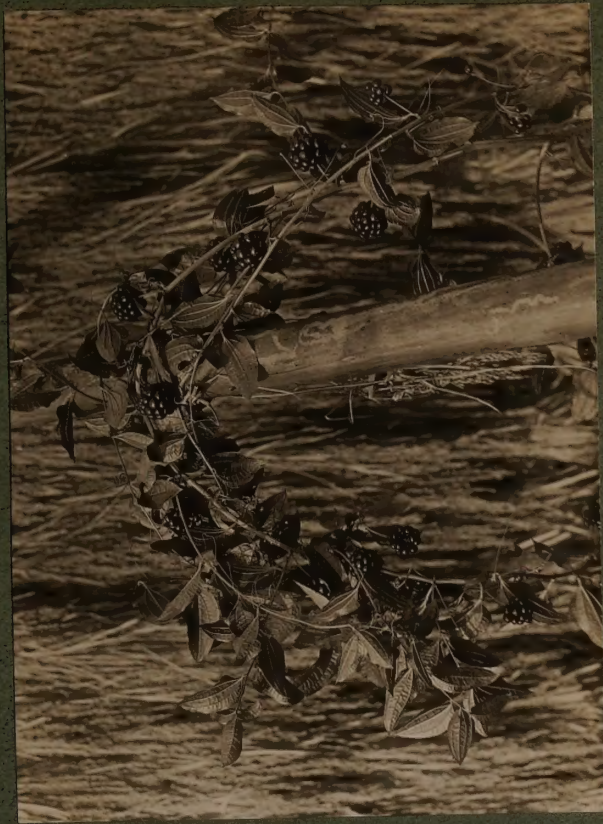

A nearby picture of this so-called
pear for the local old name as
#44374. Red and Korean
specimens numbered 1451

44376 Red collected in China
Dank, China, Japan. Red #1450. This is a
nearby view of a more fruiting branches of our
undetermined berry shrub. The leaves light
red berries are red to persist after leaves
fall. Very handsome.

44378 Akita, Japan. Ginkgo. A nearby view of fruiting branches of Ginkgo seed of which was sent in number #1458. There appears to be some reason for believing that the Japanese Ginkgo is somewhat different from the Chinese

44381 Smilax sp. Kawaguchi, Japan. A nearby view of a portion of a wild vine as a binding material. Seed #1471. We believe that this has ornamental value.

44382 A nearby view of a
portion of a thick leaved pink and red
themed shrub with crowded branched
and many stems. It looks good for an
ornamental and was found on the road

44391

Mr. H. Singhal's gathering and of
the attractive ornamental plant of
Eleocharis sp. near Chichipin,
Japan.

44398 En route from Kagunari, to
Chikibu, Japan. A member of the fruiting
branches from the plant shown in #44397.
Cleodendron sp. Oct. 18. 1929.

44441 Oct. 26. 1929.
View of a portion of one of the fruiting branches
of one of the trees shown. Fruit is pinkish
white with red seed. Foliage large and a
deep wine red. Very handsome.

44426 Oct. 26, 1928.
 View showing a portion of a very attractive
 vine of *Eurogynium* climbing to the top of
 a *Acacia* tree. Seed and in smaller number
 #1555 & 1561

44427 Oct. 26, 1929.
 A nearby view of fruiting branches
 from above of just tree in the
 background. *Acacia*. The fruit
 which is abundant and small
 blue and black in color.
 Undetermined.

45725 Ipomoea pes-caprae, Morning
 Glory. Botanical Garden, Beijing.
 A nearby picture of flowering
 plants. The flowers are pink, with
 bright silvery lining when this picture
 was open.

45726 Euphorbia marginata
 Botanical Garden, Beijing. A nearby
 view of two fine specimen plants, really
 quite remarkable. We were told that the
 seed was introduced from America.

It was midday in
 a white throat and the flowers were

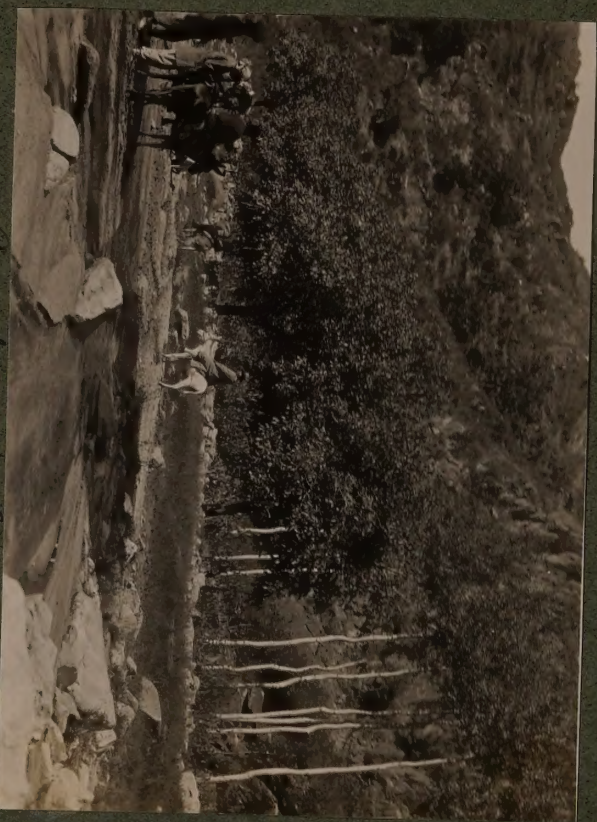

45781 Josephine Josephine Van pendula, Peking, China.
A short row of weeping Josephine, but a short distance
northwest of the American Legation. This for a weeper is very
fine.

45782 Sophora japonica var pendula, Peking, China.
 A nearby picture of similar specimen tree. Nearby is a large
 marble lion.

45789 *Acrocyrtus*
laevigata, Sharvin, Chocoma.
 Small tree with round inflated seed pods giving the tree a very pretty
 appearance in the fall. This tree is said to grow to a height of 20-30
 feet.

45818 *Populus* sp. *Androsace*. En route
 to the bus for from Yang Shau,
 Chiklo, China. Beautiful white bark
 poplars along a mountain stream.
 The tree is very pretty
 giving the tree a very pretty
 appearance in the fall. This tree is said to grow to a height of 20-30
 feet.

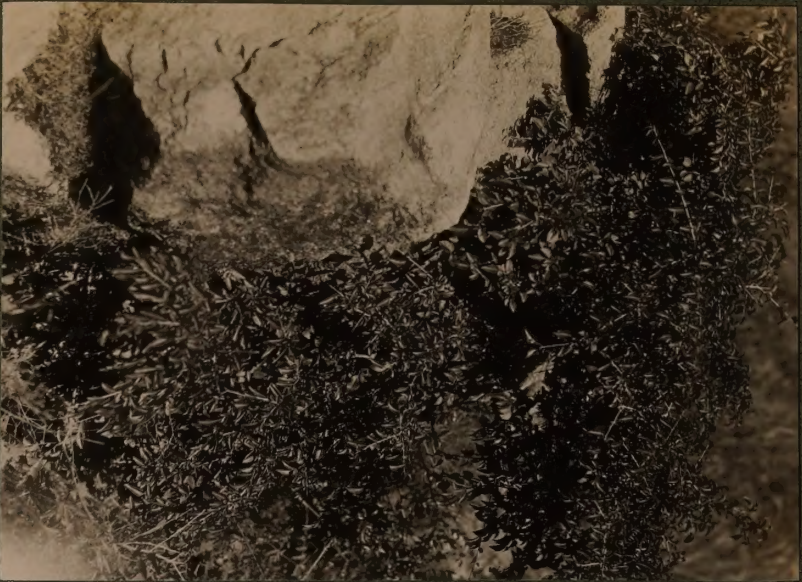

45819 Celtis sp. Hackberry. En route from Hang Shau to Fa Hua Su. A nearby view of flowering Celtis on a rock lined along the trail. This is really an attractive thing.

45828 Lespedeza sp. Fa Hua Su. A nearby view of flowering and fruiting branches of Lespedeza with beautiful pink flowers. The seed is not yet ripe.

seed 7467

45837 *Rhus* sp. In the low
view nearby of one of these dwarf, thorny,
black, prickly shrubs as seen in nature
on the mountain side, at the edge of a boulder.
Seed seen in under # 7023

45832 *Quercus* sp. Broad leaved oak,
In the low view of small oak
plants 12" to 20", fruiting in abundance.

45835 Aster sp. white daisy, Fa Hua Ssu,
Chihli, China. A nearby picture of a wild white daisy
with a golden yellow center in an orchard on a
mountain side. It was lonely at the base of a pear
tree and we thought it worth a 5x7 picture.

seed 7463

45836 Thurbergia, Ta Kua Lee,
A nearby view of a succulent with
small pink flowered plant, also Camp-
and and Thurbergia. See picture
45837

45837 Thurbergia, Ta Kua Lee,
A nearby view of a succulent with
small flat gasterolike pink colored
flowers. Grows on rocks and in
very dry exposed situations.
Thurbergia specimens # 7173
and 7165

45-838 Undetermined succulent, La Huasteca, A nearby of a really very
 beautiful and attractive pink flowered succulent growing on the north side
 of a hill on decomposing granite. At the top of the plateau are a few sprays
 of a blue flowered *Campylulidula* in both lobed corners (specimens at herbarium). The
 succulent would surely make a good rockery plant. Herbarium
 specimens of succulent # 9173

45845 Quercus sp. Broad leaved
oak. In the San Chili, Chino A nearby
view of Quercus oak 18" to 20" bearing
fruit. See picture # 45832.

View of flowering 45846 Quercus sp. In the San
Chili, Chino A nearby view of a rampant
very ornamental. See picture # 45832.

A nearby picture of *Desmodium* sp. China
 of flowering branches for but 4 collins.
Desmodium in nature. See pictures
 45849 & 45850 and 4467

A nearby view of a beautiful pink
 flowered *Desmodium*. No seed was

45850 *Asplenium adnigrum* (L.) Hook. & Grev.
 A nearby
Asplenium adnigrum on a mountain side. The pink and
 white colored flowers were ground

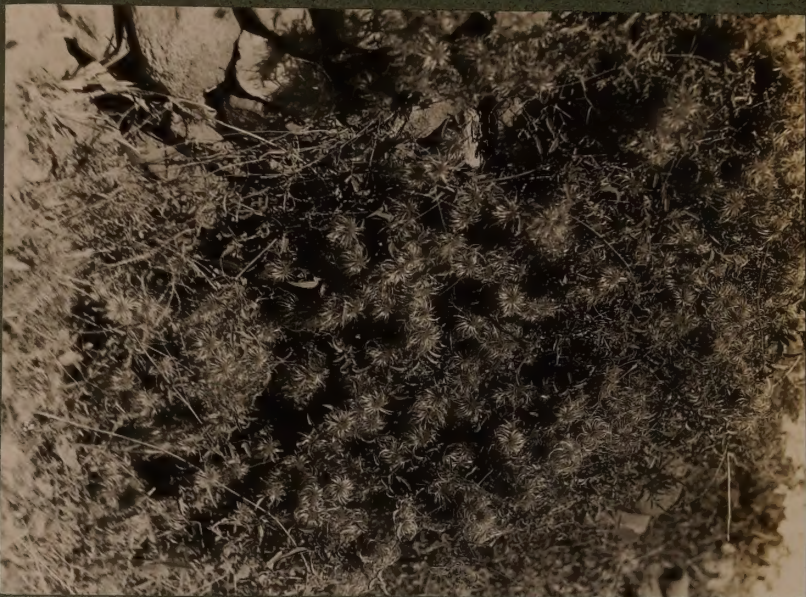

45863 Chrysanthemum sp.
At the base of the Great wall of China
above Ching Tung Chiao, Rey. station.
This was wonderfully attractive cluster
of wild chrysanthemums with a delicate
light pink color and golden yellow center.
well worthy of introduction. Sept 20, 1936

H.B. 7207

45883 Sapindus sp. B. Soop
pod. Sept. 25, 1936. On the mountain
side above Cheng Kuo San Temple at
Ba Sa Chue, Western Hills. Seed
taken from this tree measured
the bushes. We secured seed and
it goes in under # 7263.

Along the route from Pa-ta Chud to Chuk Tai Pau.
 A nearby picture of the fluffy feathery seed heads
 of a small spined seed climber. Seed from
 plants like this are used in water oven # 9265.

4590 *Pinus bungeana*, white bark pine,
Chieh Tai Sou Temple, Western Hills, China. A rather distant view of the largest white barked pine we have thus far seen in China. At about two feet above the ground it measures 228 inches in circumference. It has nine large branches and is called the "nine dragon pine". We collected a few seeds from this tree. They are sent in under our # 7283. This tree is reported to be more than 900 years old. See 45910.

45910 *Pinus bungeana*, Chieh Tai Ssu temple.
 A fairly nearby view of the southeast side of the 900
 year old Nine dragon pine. Meditating as to what
 may have transpired here since this 900 year old
 tree was planted. See picture #45911

#5911 *Pinus bungeana*, white barked pine.
View of the 900 year old nine dragon pine from the
northeast. See pictures # 4590.9 10-12. Admiring the
beauty and grandeur of this wonderful old tree.

used

45912 *Pinus bungeana*, white barked pine.

A nearby view of a portion of the 900 year old wine dragon pine from a position to the south. It is truly a most wonderful and magnificent specimen. It does not, however, show as pure white a bark as the one at Tan Chou Sou, #45933.

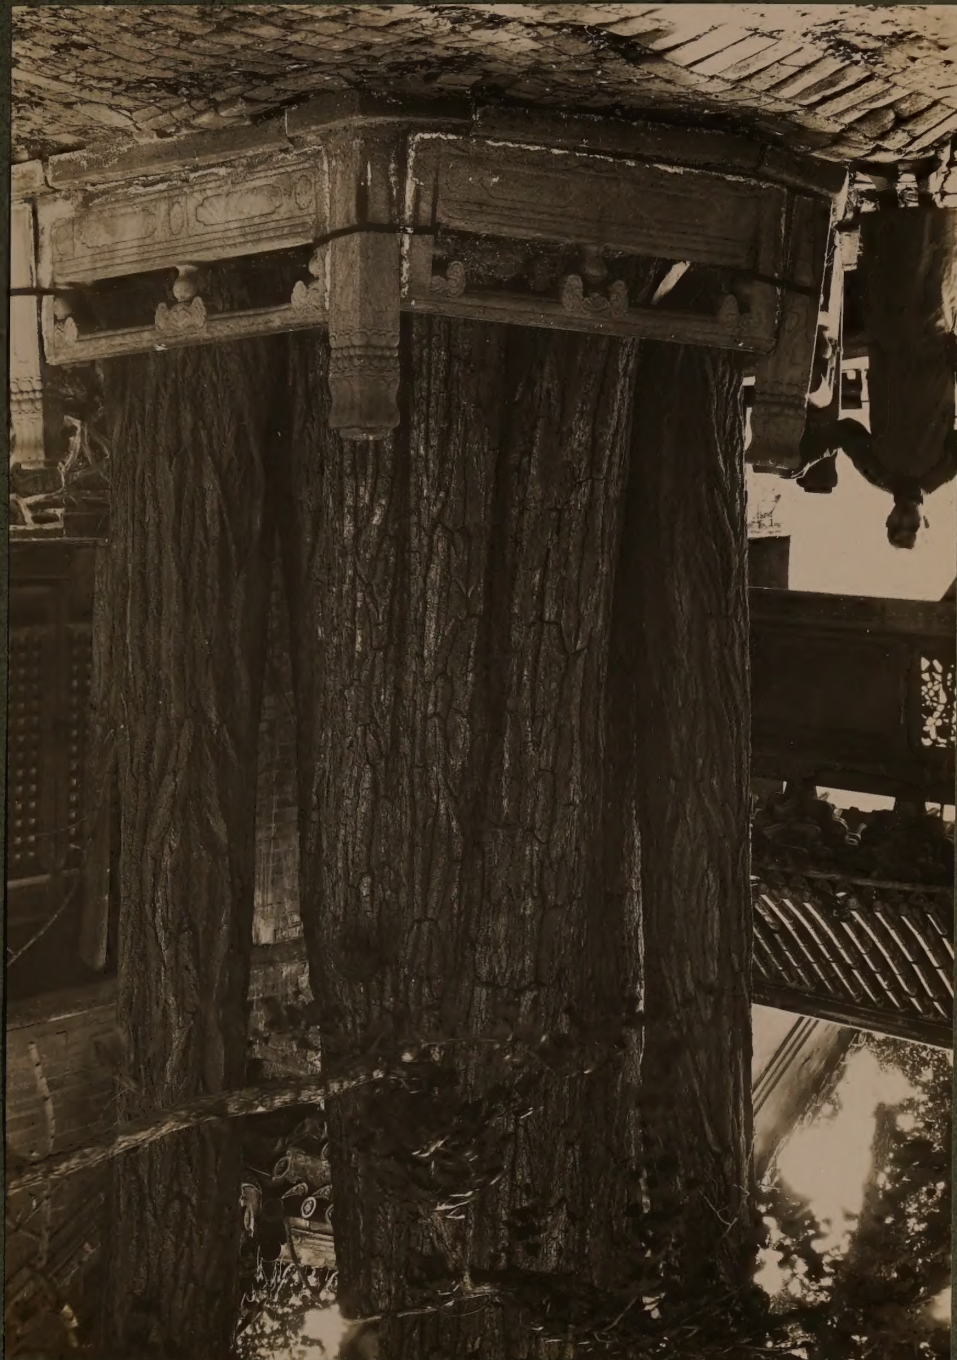

42732

45916 Sapindis sp (?) Soap foot tree.
 Along the trail to Tan Chon San Progu Chich. Sas
 Son. This is the best Soap foot tree we have seen.
 It was well loaded with seed pods 10" long.
 This should make a good ornamental. Seed
 sent in under # 7403.

Jan Chen Ltd
 45999 *Pinus bungeana* tree
 Hsueh-shan, China. View of garden
 at a fine old *Pinus bungeana* tree 100 feet or more in height (about)
 100 ft in diameter. We were told that this specimen of
 the *Pinus bungeana* tree for it grows a new trunk every time
 there was a new emperor. See picture # 45938-31

45-931 *Pinus bungeana* tree.
 China, a nearby view of a portion of the
 trunk of a tree specimen tree in one of the courts of the
 temple. One of the trunk has large scars near the base
 on the left. The large trunk scars are somewhat
 50 feet or so before branching. See specimen #45929-30

45930 Ginkgo biloba. Maidenhair tree.
 Tan Chou Ssu, western Hills, China. View of a portion of the
 five oed ginkgo from the south showing the pails erected
 in its honor. See pictures # 45929 & 45931

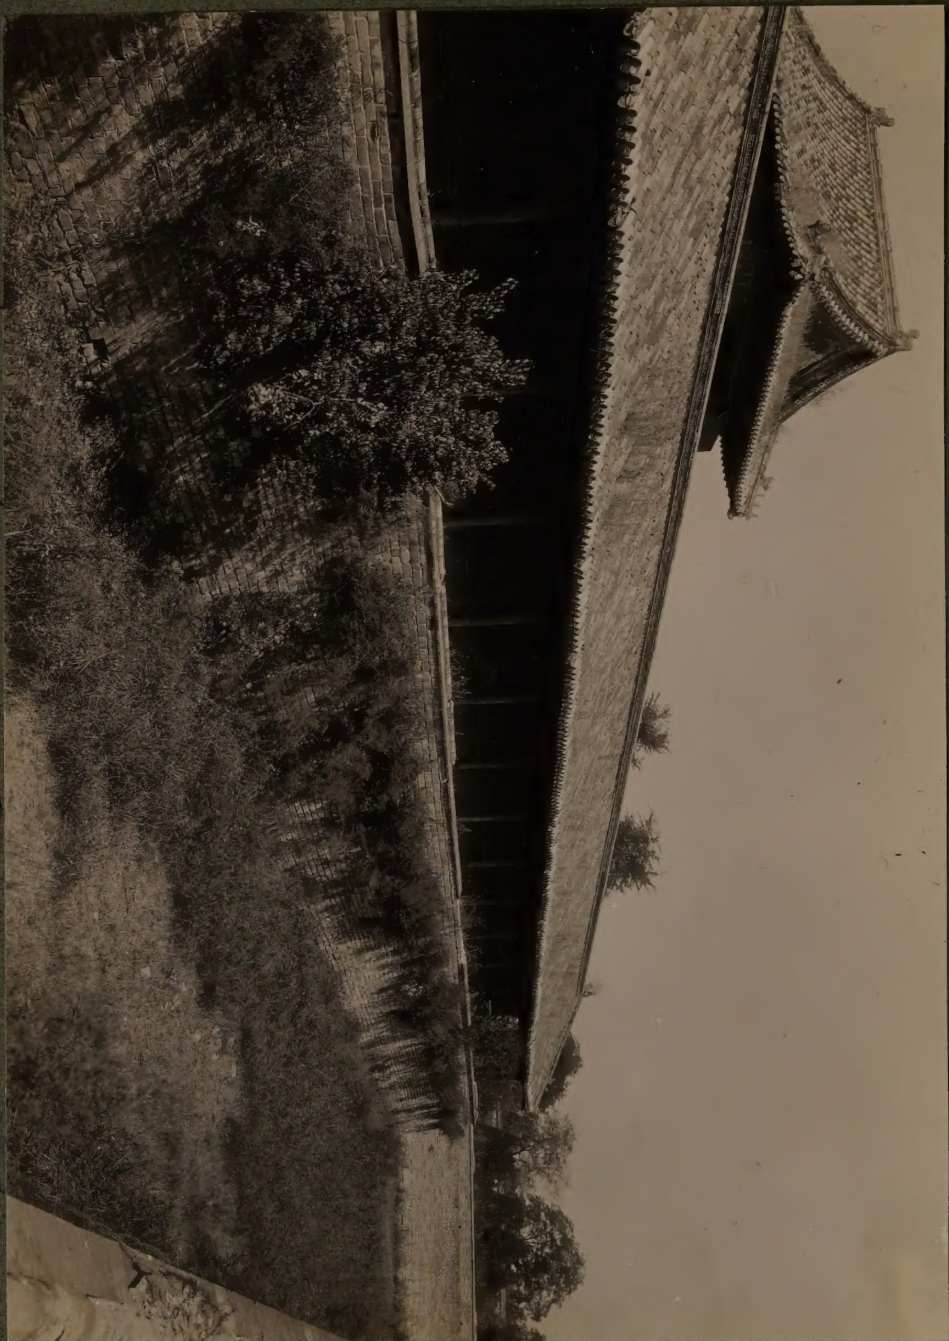

4593 B Rock Garden. Jan Chou San Temple.
A nearby view of a miniature rock garden taken to
show the use of a growing fungus, at the top, a little to
the left of the center. This is the first time we have seen
a living fungus used in ornamental gardening.

45-933 Pinus hungiana. white barked
 pine. Tzu chow Tsu. View of a very fine specimen of
 the whitest barked pine. (Trunk and larger branches)
 that we got home seen. Seed was secured and given
 our field number #7312

45974 *Chrysanthemum* sp. Yellow mum. wild.
 Peiping, China. This pectinate is a little more than half life size.
 This is the single yellow flowered mum, now found about
 creeping in abundance. The dried flower buds are used
 as tea. The plant is a strong vigorous grower. We think
 it will make a good full flowering border plant and
 perhaps a pot plant too. It might prove valuable in
 breeding experiments. Seed 7437

4599 *Chrysanthemum* sp. 1 *Euonymus* sp. Temple of Heaven
 at the west wall, 26 *Euonymus* sp. Well of which road collected from
 4599 *Chrysanthemum*. These names are really a good thing. See picture
 # 4599

45999 *Chrysanthemum* sp. wild yellow min. Along the
 walk to the Altar of Wisdom, Tsiping, China.
 This small yellow *Chrysanthemum* will make a good fall blooming
 border plant. 7457

46078 Palaeanthus tuberosa,
Taiwanese Harvesting, Chung Ling X

46081 *Poleanthus tuberosus*. Tuberosae. Near the village of Chumung
 at the garden of Mr. J. J. A. nearby ruins of tuberosae with the bases and
 tops cut off piled in rows to save. They are left in the open in this way for
 two days or two weeks. Bunches and in number # 7406.

46082. Solanum tuberosum, Tuberose, near the village of
Chung Tung at the garden of Mr. Tien. Showing rows of tubers
and grades of winter vegetables. Buds were sent in. Number # 7406

46083 Allium tuberosum. Tuberosa. Peiping.
 Nearby view of commercial bulbs purchased to-day from a
 gardeners near the village of Chung Ling. These bulbs are typical
 of the bulbs we saw in preparation of harvesting and curing.
 The four leaves left on the top clump we think are used to tie
 the clumps to gather for hanging over a beam or pole during
 storage. All 12 clumps we purchased had the four
 leaves left on top. *March 7, 1930*

near Beijing.

or pole during
its growth

46084

Lehrysanthemum sp. Chung King, China.
A nearby view of pink flowered argemone. 6 buds to
the plant, grafted on artemisia. These plants sell
at the garden for five cents each, per plant.

46085 Chrysanthemum sp. Chinese with carrying basket
 These Thunberg are all grafted on Chrysanthemum sp. There are sixteen
 plants on each basket.
